Amendments to the Claims:

The following listing of claims will replace all prior versions, and listings, of claims in the application:

1. (Previously Presented) A pattern formation method of forming a film pattern by disposing liquid droplets of a functional solution on a substrate, the method comprising the following steps performed in the following order:

filling a passage, including a liquid droplet ejection head to dispose the liquid droplets and a conduit to feed the functional solution to the liquid droplet ejection head, with purified water;

filling the passage with a solvent dissolving both a solvent contained in the functional solution and the purified water;

filling the passage with the solvent contained in the functional solution;

filling the passage with the functional solution;

forming banks corresponding to the film pattern on the substrate; and

disposing the liquid droplets into grooves between the banks with the liquid droplet ejection head.

2. (Previously Presented) A pattern formation method of forming a film pattern by disposing liquid droplets of a functional solution on a substrate, the method comprising the following steps performed in the following order:

filling a passage, including a liquid droplet ejection head filled with a predetermined storage solution and a conduit to feed the functional solution to the liquid droplet ejection head, with a first solvent dissolving the storage solution;

filling the passage with a second solvent dissolving both the first solvent and a solvent contained in the functional solution;

filling the passage with the solvent contained in the functional solution;

filling the passage with the functional solution;

forming banks corresponding to the film pattern on the substrate; and

disposing the liquid droplets into grooves between the banks with the liquid droplet ejection head.

3. (Cancelled)

pattern formation method according to Claim 1.

- 4. (Original) The pattern formation method according to Claim 1, the functional solution exhibiting electrical conductivity by thermal or optical treatments.
 - 5. (Original) A device manufacturing method, comprising:
 forming a film pattern on a substrate, the film pattern formed on the substrate by the
- (Withdrawn) An electro-optical device, comprising:
 a device manufactured by using the device manufacturing method according to
 Claim 5.
 - 7. (Withdrawn) An electronic apparatus, comprising: the electro-optical device according to Claim 6.
